## The Video Games Profit Boom

Since its inception, the video games industry has undergone incredible growth, providing excellent investment and instant cash opportunities to individuals who had never before operated a full or part time business of their own. Depending on location, video games can provide not only

ready cash, but a high return on investment from the very first day. No technical expertise is required, nor are there inventory or overhead problems. With VideoPlay's help, a single game can start an individual on the path to real income growth in the video games business.

Trouble-free Coinco coin mechanism  
rejects counterfeit coins

Hinged top, plug-in logic board and  
armor-wrapped cable provide  
ease of servicing

Slip-clutch potentiometer  
holds up to abusive play

## A Word About Quality Control

VideoPlay has a single commitment to its quality control program — solve problems on the assembly line before they become problems in the field. A designer and manufacturer with thousands of games on location, VideoPlay maintains one of the most rigorous quality control programs in the industry. For example, TV monitors

are "burned in" with a working logic board for 120 hours before installation in the game console. The assembled game is then operated continuously for an additional 120 hours. Finally, each game — not every third or tenth — is operated under simulated playing conditions prior to shipment.

## VideoPlay Int'l

Designers and manufacturers of high-technology commercial video games, wall screen projection television systems and specialty product dispensing equipment for investment and profit.
